## Chapter 1

### Why you should import umbrellas from China

China dominates the global production of the umbrella market. In 2013 China exported over 85% of its entire umbrella output. Of this amount 12.6% was exported to Japan, 11.5% was exported to the US, 9.8% was exported to Brazil, and 4.7% was exported to Italy while 4.6% was exported to Germany. These 5 countries together made up the largest global destinations of umbrellas.

In 2013 China was the single biggest supplier of umbrellas globally with an estimated 92% of the global share of umbrella exports. Belgium and Germany represent the fastest growing rate of worldwide umbrellas supplies from 2008-2013. Belgium grew by 37% each year while Germany grew its exports by 23% yearly. Despite India and USA is the leading global manufacturers of umbrellas,

they do not export much of their umbrellas due to heavy local consumption.

The use of umbrellas is inescapable the world over and as a result, the umbrella market is an enduring one. Due to a huge population, China has become one of the world's largest sources of labor resources. This has resulted in several industries growing within mainland China including the umbrella industry.

At first, Germany was the primary producer of umbrellas before Japan took over in the 1970s, production then moved to Taiwan in the 1980s before China started dominating the market from 1990s till now. Currently, China produces and exports the biggest share of umbrellas sold and used around the world. China's market capitalization of the global umbrella industry stands at 80% hence dominating the market entirely.

## Chapter 2

### China Umbrella Industry Situation

Although there is fierce competition in the China umbrella industry, the creation and operation of large, medium and small umbrella enterprises are becoming more frequent. Also to differentiate themselves from each other these companies have incorporated extensive market research on their products.

This has resulted in the rise of a significant number of domestic umbrella brands which have become global leaders in the industry. This article will, therefore, analyze the overall umbrella industry comprehensively and accurately.

The report starts with an analysis of the thriving nature of the umbrella industry in China. It will also give a good picture of the competitive trends emerging in the local umbrella industry. Moreover, the report will also highlight the socioeconomic benefits of the umbrella industry to the local economy and its inhabitants.

The article, therefore, presents a rare opportunity for research institutes, umbrella manufacturers and buyers to accurately understand the latest advancements in the industry.

## Chapter 3

### China Umbrella Market Situation

Presently China's umbrella market is at its highest level in terms of overall consumption and production. Regular Chinese buyers and producers have been forming consumer and manufacturer trends for fashionable and functional umbrellas all over the world.

Moreover, due to increased economic and social development, China's economically developed regions such as

Guangzhou, Shanghai, and Beijing are showing clear signs of differentiation in regard to umbrella consumption. Cheap umbrellas are fast moving and they have a huge consumption volume.

On the other hand, high-end and luxurious umbrellas are quickly becoming fashion statements and entering the lives of ordinary customers. Also, deluxe umbrellas such as outdoor picnic umbrellas and golf umbrellas are been accepted by high-income families.

## Chapter 4

### The Umbrella Manufacturing Process In China

Although the modern umbrella industry has also entered the large-scale factory production, it still needs a significant amount of manual production. This is because of the specialty needed in making umbrellas. Manufacturing an umbrella involves assembling its vital components which include the shaft, a runner, stretchers, ribs, and a canopy.

Over the years the fabrication of canopies has experienced several modifications. In the past cotton and linen were used, today microfiber fabrics are used.

Canopies are therefore made from several pieces of fabric stitched together. The ribs and stretchers act as the skeleton of the canopy and are responsible for the opening and closing of the umbrellas. Ribs and stretchers are generally made from steel with stretchers been linked to the shaft through a runner.

On the other hand, shafts are often manufactured using fiberglass, aluminum, wood or steel. Folding umbrellas have a transferrable shaft that can be adjusted to different lengths. Most of these processes require manual expertise. This means the umbrella industry is greatly dependent on labor resources due to its labor-intensive nature.

At their height, Germany, Japan, Taiwan, and China had significant low-cost labor resources. Hence showing that the umbrella industry has always developed around markets that have cheap and available labor resources. This is due to lower production costs. In addition to having a massive pool of human resources, China undertook an industrial revolution from the 90s.

This helped it become one of the major countries that produce and export spare parts used in the processing and assembly of almost every product in use today. The reliability and scale of these industrial systems are huge making China an absolute hub for umbrella production.

## Chapter 5

### Current China Umbrella Industry Trends

Traditionally umbrellas were particularly used as rainproof accessories. However, this has changed in the past years and umbrellas have evolved from this singular function to a variety of uses that include practical or decorative uses. Furthermore, some umbrellas are designed to be lighter and smaller while incorporating a wide array of color schemes. Umbrellas became fashion accessories now.

Umbrellas have also included a variety of other functions that include UV protection umbrellas, gift umbrellas, golf umbrellas, advertising umbrellas, garden umbrellas, beach umbrellas, and automatic opening and closing umbrellas. The ever-changing nature of market demands has also resulted in the development of the umbrella industry as a whole.

For instance, existing umbrella manufacturers are looking further than the production process alone. These companies have been converted from production based corporations into international traders with global brands and sales/distribution channels.

Some of these companies have also evolved into manufacturing high-end and luxurious umbrellas hence requiring research and development departments which are responsible for coming up with new umbrella designs.

The umbrella industry has also seen a growth of OEM production where customers come with their own product specifications and the manufacturer produces the umbrellas based on these requirements.

Lastly, the Chinese umbrella industry might experience a transformation. This is because some of the domestic umbrella manufactures have started setting up factories in Southeast Asia and other areas with lower labor costs. This might usher in a new round of regional transfer of umbrella production.

Furthermore, the growth of industrial groups in the umbrella industry has resulted in the interdependence between several businesses which are found within specific geographical areas. Since these enterprises are interdependent to

each other it establishes a competitive advantage in the particular geographical area.

The high concentration of similar enterprises in a certain region reduces costs such as exchange costs and production costs. It also improves market competitiveness and enhances economies of scale.

## Chapter 6

### Where is China Umbrella Production Bases located?

The main umbrella manufacturing provinces in China are Jiangxi province, Zhejiang province, Jiangsu province, Guangdong province, and Fujian province. However, Zhejiang province and Fujian province take the majority share of the export volume of umbrellas from China. These two provinces are home to the four main umbrella production cluster bases.

They include China's umbrella capital, Dongshi Town, Jinjiang, Fujian, China Umbrella City – Shishan Town, Nan'an, Fujian, and China Umbrella City – Zhejiang Shangyuxia Town, China Umbrella Township – Nanyang Street, Xiaoshan, Zhejiang.

These regions have been developed over the years to cover the majority of China's local umbrella industry. Most of the major domestic umbrella manufacturers and businesses have come from the above-mentioned regions.

## Chapter 7

### Economic And Social Benefits Of The Umbrella Industry

Like any industry, the umbrella industry in China has had positive social and economic impacts. For starters, the industry has bolstered the Chinese local economy significantly. This is through the creation of jobs and elevating large groups of people from poverty through employment.

Umbrella manufacturers have also helped industrialize some of China's

rural areas. This is by building social amenities needed by the firm such as roads, electricity and housing facilities.

## Chapter 8

### How To Search For The Best Umbrella Manufacturers

#### Peers, Colleagues, and Friends:

We all know that friend or colleague that always has trendy accessories including umbrellas. If that's the case you could ask them where they got them from. They will act as your referral point and direct you to the correct seller or supplier.

Asking for referrals is one of the best ways of searching for suppliers since it

saves you the time and effort used in researching new suppliers. Also, you will have an accurate idea of what to expect from the supplier since you have already assessed the product based on your peer's insights.

#### The internet

For those of us not lucky enough to have fashionable colleagues or friends, we have to resort to using the internet especially Google search. To start, search for "Chinese umbrella manufactures" from Google. Next, browse through the search results, you will likely get a ton of Chinese umbrella company's websites. Your mission in this phase will be filtering out the results.

Not all umbrella manufacturers on the internet are reliable. Hence you have to research extensively and evaluate their reliability and expertise through the internet. Look out for any red flags by paying close attention to the content on their websites. Some of the considerations to look for include the number of years they have been in operation, customer testimonials and reviews, company photos, contact information, company infrastructure and the number of employees.

Good and reputable umbrella manufacturers must have at least 5 years of umbrella production experience and have a minimum of 30 employees in their team. A prime example of a dependable umbrella firm is Huifeng Umbrella.

This company has been in the business of producing umbrellas for more than 30 years. Therefore, ensuring considerable expertise in this space. What's more Huifeng has a total number of 80 employees who are all trained to produce high quality and attractive umbrellas.

Lastly, due to Huifeng’s long period in the industry, it has established numerous long-term partners and clients who can act as referrals. There are also other huge umbrella manufacturers with over 200 full-time workers.

However, it is difficult to find these companies on Google since these companies already have an established reputation in the umbrella market and numerous stable clients. As a result of these factors, these firms rarely market themselves on Google and as a result, it is very difficult to find them online.

**Alibaba.com**

Alibaba is also another good place to source for umbrella manufacturers. Alibaba is an online platform meant to connect manufacturers and wholesalers to retailers. As a result, many umbrella manufacturers use Alibaba to find clients and they are often cheaper due to the aggressive competition on the platform. Still, it is difficult to estimate the quality of their services.

If you have the time and energy you could source your umbrellas from a variety of umbrella suppliers and compare the quality. However, the risks involved in this are high. It may end up costing you a lot of money and time. The best ways to avoid this is by looking at the suppliers rating, other buyer’s testimonials/reviews and asking for samples.

**Trade Fairs**

If you are not comfortable with sourcing for umbrellas on the internet you could choose to visit trade fairs and find umbrella manufacturers directly. Some of the most popular trade fairs are the Yiwu international fair, Hong Kong fair and Canton fair. Fairs are particularly a good way of looking for suppliers since it adds a personal touch to the whole experience.

This is because you get to talk to some of the representatives of these umbrella companies and test their products. The only drawback of using trade fairs is the businesses on the show are big companies. They cater to the needs of big importers such as supermarkets.

These big importers spend millions of dollars in purchases annually. If you are just a small or medium-sized company/importer with only tens of thousands of dollars in purchases yearly the fairs may not be the best place to find suppliers.

## Conclusion

We hope the above analysis and description of the China umbrella industry help you make clear corporate directions, make the right business decisions and utilize emerging market opportunities. The article has also underlined the latest developments in the industry hence enabling you to prospectively identify unmet market needs and trends.

This could act as a good vantage point for sustainable business development and also help you to effectively avoid the investment risks involved with the industry.
